Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant representative, Mr. Carlson called to discuss about claim 1 in particular the limitation of "simultaneously machining a floor and opposite interior wall surfaces of the cavities along a plurality of elongated cavity paths." Both the Examiner and Mr. Carlson agreed that although Butter discloses a general teaching of machining a continuous cavity along an elongated path, however it teaches that the simultaneous machining of the floor and opposite interior wall surfaces of the cavity is done in only a portion of the path while the rest of the path is done in multiple passes that does not include the simultaneous machining of all three surfaces. Therefore, the Examiner agreed that the claimed invention is defined over the prior art of record and therefore the case is allowed. In addition, the Examiner will amend claim 15 to include that the floor and opposite interior wall surfaces are simultaneously machined" to overcome the art of record. As for the rest of the independent claims 12, 13 and 14, the Applicant has amended the allowable subject matter into independent forms to define over the prior art of record.
